

Mobile Inventory Manager

When taking inventory, would it help if you could use a hand-held scanner to reduce data entry, increase accuracy, and save time?

With Mobile Inventory Manager (MIM), you use a hand-held scanner to count items on the sales floor and in the warehouse. Then you plug the scanner into your computer, transfer the updated counts into TireMaster, and adjust your inventory quantities automatically.

Because MIM reduces the amount of data entry associated with taking inventory, you can prevent errors and save time. There's no more printing count sheets and hoping you can read someone else's hand writing. Using MIM cuts your expenses too. You don't need to hire an outside inventory-service provider—your own employees use your own equipment to take counts.

In addition to simplifying inventory counts, you can use MIM to create bar code labels for items and warehouse bins. These labels can include information such as an item's description, size, and product code.

TireMaster and Mobile Inventory Manager help you:

- Increase the accuracy of inventory counts
- Spend less time taking inventory and entering corrections
- Trim expenses
- Create bar code labels for items and bins

For more information about Mobile Inventory Manager and TireMaster, call **800-657-6409**, email info@asatire.com, or visit www.tiremaster.com.

"Our inventory counts go more smoothly than before. With Mobile Inventory Manager, it's easy to update item quantities, and I don't worry about data-entry errors."
